Test Field

Ambiente Lavoro 2019 dedicates ample space to **field training**. In a specially set up area, companies will have the opportunity to show the operation of their products by placing them in a risk simulation. The **demonstration area** will be flanked by an area dedicated to **classroom training** in which near miss situations will be subject to verification and debriefing. The field tests will examine in depth the risks that occur in the most different activities - from work at height to those in confined spaces - and which cause accidents and the most recurrent diseases - from diseases affecting the respiratory system, to injuries to the limbs and to the head.

Safety Tester

Does your company have an innovative product that allows better protection against accidents and occupational diseases? Participate in **B2B meetings with the health and safety managers of the major Italian companies**, which will present their injury and disease prevention needs at the exhibition. In a dedicated meeting area, the selected Safety Testers will discuss with the companies about products and services in line with their needs.

DPI Dealer Day

Ambiente Lavoro reserves a day to the world of **PPE distribution**.

The most important companies in the sector will be involved in:

- a **workshop** dedicated to strengthening **soft skills** to create value in relationships with customers
- a **networking lunch** with the PPE companies participating in the exhibition
- the agenda of **B2B meetings with the health and safety managers** of the major Italian companies

For adhesion **by 31st May 2019**
